

Homestead Module — Video Summary

Kingdoms of Malcion | Companion document for the Homestead demo video | July 2026

***Homestead** lets players create personal indoor **Rooms** and outdoor **Houses**, decorate them with owned inventory items in a visual editor, and save layouts — with admin-controlled item rules, slot limits, and full ownership validation.*

What Is Homestead?

Homestead is a **personal decoration system** for players. Each user can:

- Create **indoor Rooms** and **outdoor Houses**
- Decorate them with **items from their inventory**
- **Save layouts** (furniture placement, wallpaper, flooring, etc.)
- Return anytime to edit and update their spaces

It is **not** a shared world or multiplayer builder — each player owns and manages their own rooms and houses.

Main Concepts

Concept	Description
Room	Indoor space (parlor, bedroom, study, etc.)
House	Outdoor space (cottage yard, garden, exterior area)
Editor	Visual canvas where players place and arrange items
Inventory	Only items the player owns and that are configured for homestead appear in the editor
Slots	How many rooms/houses a player can create (expandable via special items; staff may have unlimited slots)

What the Video Demonstrates

Part 1 — Introduction

Homestead lets players create personal indoor and outdoor spaces and decorate them with inventory items. Layouts are saved per room or house.

Part 2 — Navigation

- **Homestead** in the top navbar → **Rooms** or **Houses**
- **Rooms** (/homestead/rooms) — indoor spaces
- **Houses** (/homestead/houses) — outdoor spaces

Both lists work the same way: create, edit, delete, and open the editor.

Part 3 — Create, Edit & Delete Rooms

Players can:

- **Create** a room with a name (3–100 characters)
- **Rename** via Edit
- **Delete** a room (removes layout and all placements)

Each user only sees and manages **their own** spaces.

Part 4 — Room Editor (Indoor)

The editor includes:

- **Canvas** (center) — where furniture is placed
- **Inventory panel** (right) — **Furniture** and **Surfaces** tabs
- **Save** — stores the layout
- **Exit** — returns to the rooms list

Furniture tab: click or drag items onto the canvas; drag to move; layer controls and delete for selected items.

Surfaces tab: click wallpaper/flooring to apply wall or floor styles.

After **Save**, reloading the editor shows the same layout — data is persisted.

Important: The inventory only lists items the user **owns** and that admins marked as **homestead placeable**.

Part 5 — House Editor (Outdoor)

Same editor pattern, tuned for outdoor use:

- Outdoor-style canvas (sky/grass)
- Items marked for **outdoor** or **both** room types
- **Surfaces** for ground cover / paths

Saved outdoor layouts persist the same way as indoor rooms.

Part 6 — Building Over Time

Players can start with an empty room/house, add items, see **unsaved changes**, **Save**, and **Exit**. They can return later and keep building — each space saves independently.

Part 7 — Security & Validation

- Only the **owner** can edit their room/house
- Indoor and outdoor URLs are **separate** (a room cannot be edited via the houses URL)
- **Save** rejects invalid data: wrong item type, out-of-bounds placement, placing more than owned quantity
- **Login required** — guests cannot access Homestead

Part 8 — Admin Setup (Content Configuration)

Admins configure which items work in Homestead under **Admin** → **Data** → **Items** (click the crown icon in the navbar):

Setting	Purpose
Homestead Placeable Item	Item can appear in the editor
Placement Type	Furniture vs surfaces (floor, decoration, wall, flooring, exterior, etc.)
Room Type	Indoor only, outdoor only, or both
Default Width / Height	Size on the canvas (pixels)

Admins grant items to users via **Admin** → **Grants** → **Item Grants**. Until a player owns homestead items, their editor inventory stays empty.

Part 9 — Closing

Homestead gives each player personal rooms and houses, a visual editor, inventory-driven decoration, and saved layouts — with CRUD, ownership checks, and validation built in.

Player Workflow

Log in
→ Homestead → Rooms or Houses
→ Create space (if slots available)
→ Editor → place items from inventory
→ Save → Exit

Staff vs Regular Player

	Staff / Admin	Regular Member
Slot limit	May show "Staff: unlimited slots"	"You are using X of Y room slots"
Editor	Same UI	Same UI
Items	Must still own items to place them	Must own items to place them

Quick Reference URLs

Page	URL
Rooms list	<code>/homestead/rooms</code>
Houses list	<code>/homestead/houses</code>
Room editor	<code>/homestead/rooms/{id}/editor</code>
House editor	<code>/homestead/houses/{id}/editor</code>
Admin — Items	<code>/admin/data/items</code>
Admin — Grant items	<code>/admin/grants/items</code>

Frequently Asked Questions

Q: Why is my inventory empty in the editor?

A: You need homestead-configured items in your inventory. Admins grant or award them.

Q: Can I use any item?

A: Only items marked **Homestead Placeable** with the correct **room type** and **placement type**.

Q: Can other players edit my room?

A: No — only you (or staff with admin inventory powers).

Q: What happens if I delete a room?

A: The room, its layout, and all placements are removed permanently.
